# Introduction

The Task Order Management Portal is a comprehensive web-based platform developed by HII to support the efficient management and execution of the Logistics, Intelligence, Surveillance, and Reconnaissance and Next-Gen Technology (LOGIX)Task Order. This portal serves as a centralized system for tracking, managing, and reporting on all Task Order and individual TDL/Requirement-related activities between HII and Government stakeholders.

The purpose of this document is to provide Government users with detailed operating instructions for navigating and utilizing the portal effectively. This portal has been specifically designed to streamline Task Order management processes, enhance communication between stakeholders, and provide real-time visibility into Task Order performance metrics.

The portal integrates various Task Order management functions into a single, user-friendly interface, including but not limited to TDL/Requirement tracking, document management, performance reporting, and automated workflow tools. By centralizing these functions, the portal enables more efficient collaboration between Government and HII team members while maintaining proper documentation and accountability throughout the Task Order lifecycle.

This operating instruction document will walk users through the portal's key features, functionalities, and procedures, ensuring that Government stakeholders can fully leverage the system's capabilities to support successful task order execution. The following sections provide detailed guidance on system access, navigation, and specific operational procedures for various portal functions.

# Home Page

The home page for the LOGIX Task Order can be located using this LINK.

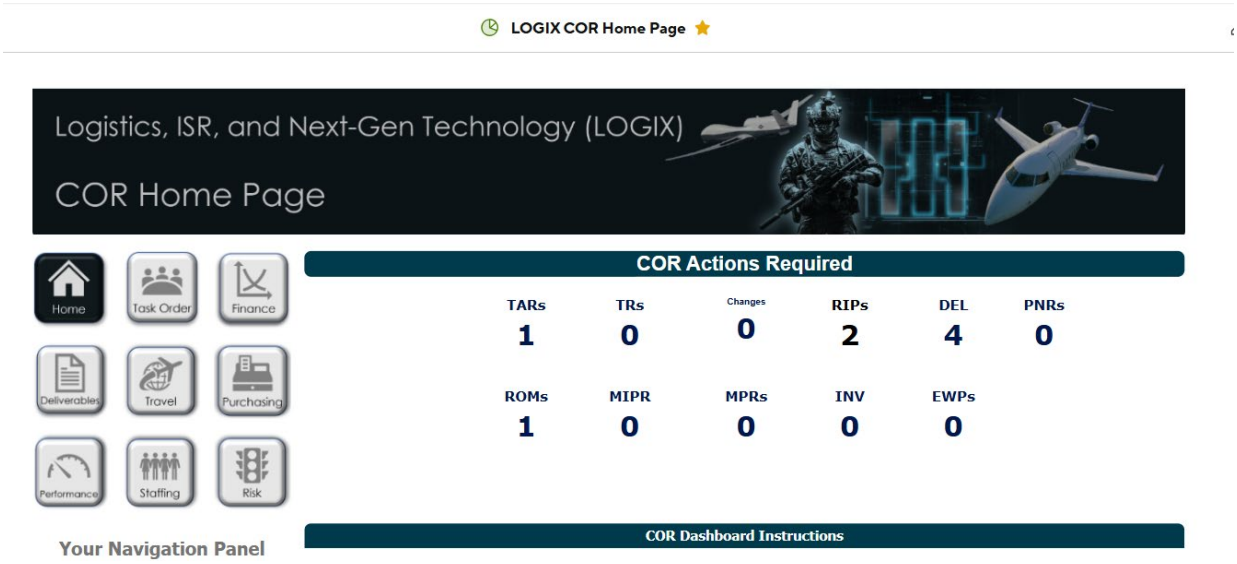

*Figure 1 LOGIX Home Page*

At the top of the home page, you will find "COR Actions Required". This provides at-a-glance visibility of pending Travel Authorization Request (TAR), Trip Report (TR), Requests to Initiate Purchase (RIP), Deliverables, Rough Order Magnitude (ROMS), MIPR, Monthly Performance Reports (MPR), Invoices, Problem Notification Reports (PNR) and Extended Work Period Requests (EWP) for the COR to review.

There will be a number indicating the quantity of items in each category that need to be reviewed. Simply click on the number and this will immediately take you to the report where you can review the item and note your Approval or Rejection of the item.

## Navigation Panel

A consistent navigation panel on the left side of the screen provides quick access to key functional areas including Home, Task Orders, Finance Reports, Deliverables, Travel, Purchasing, Performance, Staffing, and Risk management. This intuitive layout ensures users can efficiently access all task order management functions while maintaining awareness of items requiring immediate attention.

*Figure 2 LOGIX Navigation Panel*

## Reviewing Submitted Items

All submission reviews are provided in a streamlined interface for Government personnel to review and process submitted items. Each row in this view is for a unique submission. The review pane has icons on the left side to view attachments and comments, details of the request in the center, and a cell to record your Approval or Rejection for each submission, this cell is highlighted in pink.

Figure 3 Navigation Panel

Figure 4 Navigation Panel

## Attachments

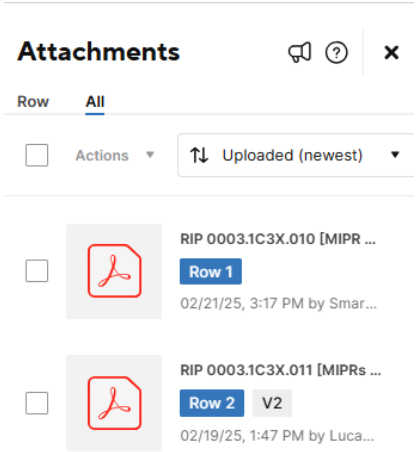

*Figure 3 LOGIX Attachment Options*

A paperclip icon appears on the left side of each item, clicking this paperclip reveals all files attached to the submission in a pane that opens on the right side of the screen. Attachment files can be reviewed online or downloaded. These files will always remain attached to the submission and will always remain available to the Government.

## Conversations

A conversation icon is available for communications between all submission stakeholders on every submission. A feature in the conversation block is that you can address someone directly by using @ and then typing their name and selecting from the list. This will ensure that the person you are addressing is notified of your comment so they can respond.

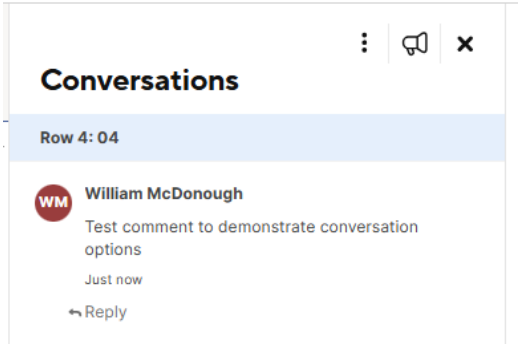

*Figure 7 Conversation options*

If rejecting a submission, we ask that reviewers create a conversation to provide a detailed explanation of the rejection reason. This will ensure our team takes immediate corrective actions and resubmits for approval.

## Submission Details

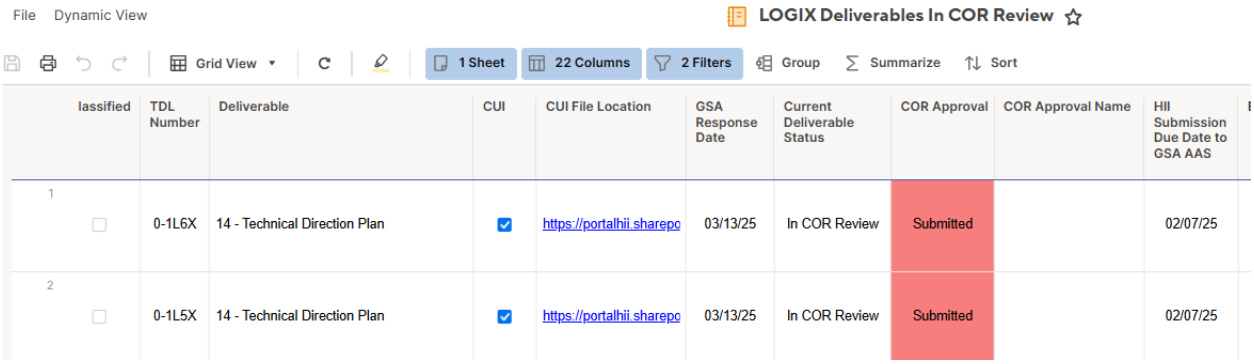

*Figure 8 Submission Details Example*

For each type of submission we have included an abbreviated listing of details which are most relevant to this submission being reviewed. If you find that you would like more or less information in these fields, please let the HII Task Order Program Manager know and we can adjust what information is shown.

On the right side of the details will always be for your review action. A pink-highlighted field indicates where Government reviewers can record their decision by selecting from a dropdown choice to Approve or Reject. Your decision is saved with this cell's history

so that we can confirm who made the selection to Approve or Reject along with the date and time of that entry for every submission.

If you select Reject, we ask that you leave a comment explaining the reason for rejection using the conversations icon described above. This will help our team resolve the matter as quickly as possible and review the correction with you.

This layout for all types of submissions (Deliverables, RIPs, TARs, TRs, etc) ensures a consistent review process and maintains clear documentation of all approval decisions and associated feedback. Additionally, the cell history provides the Government a method to validate that approvals are only made by the Government, who made the decision, and when that decision was made.

# Task Order Page

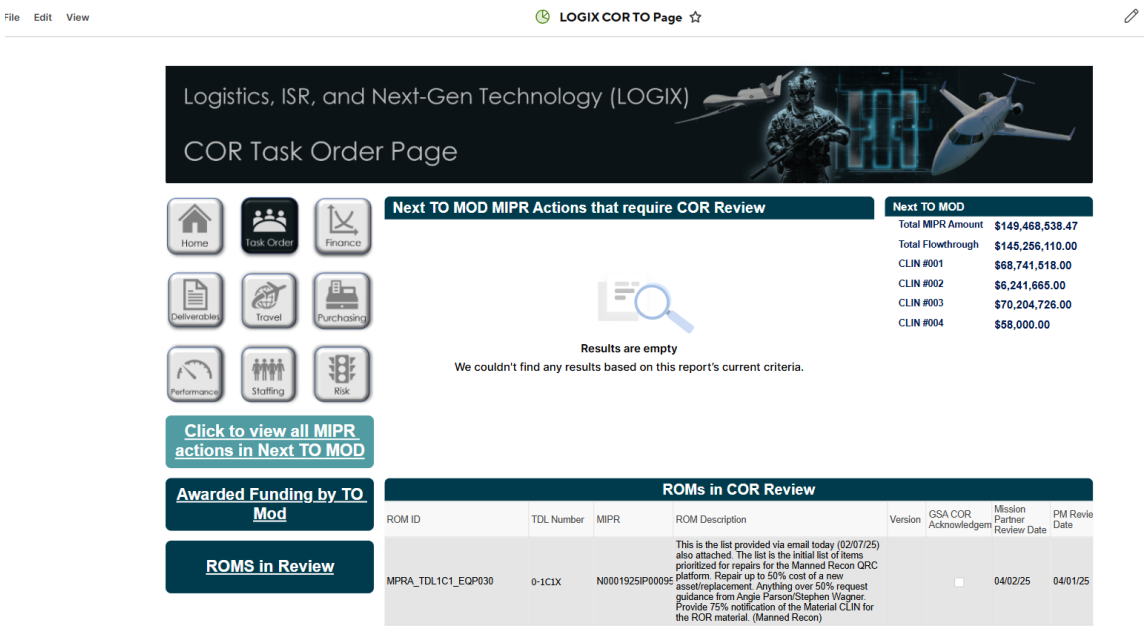

*Figure 9 LOGIX Task Order Page*

The purpose of the Task Order page is to provide an overview of all active TDLs/Requirements on the LOGIX Task Order. On this page you can view all the active TDLs, their Title, Work Description, Start / End Date, HII TDL Lead, and Mission Partner. If you click on this report, it will open the report and attached to each TDL you will also find the full Requirement Description attached as a PDF.

The Task Order Page addresses the Task Order Performance Work Statement (PWS) paragraph 4.1.5.b.1 through 8. Items 9 through 13 are addressed on the Portal Finance Page and other Portal requirements are located on their respective pages.

## Submit a new Requirement

On the left side of the Task Order Page we have left a link to a form to submit a new Requirement. This form allows the Contracting Officer or COR to inform HII about the relevant details of a new Requirement. From this notification, HII will work with the Mission Partner to develop a Rough Order of Magnitude (ROM) estimate to perform the work and detail out the labor positions required.

This submission is not to replace Appendix E of the PWS, but it allows for more timely response, increased coordination and collaboration, and expedites the filling of required labor positions.

# Finance Page

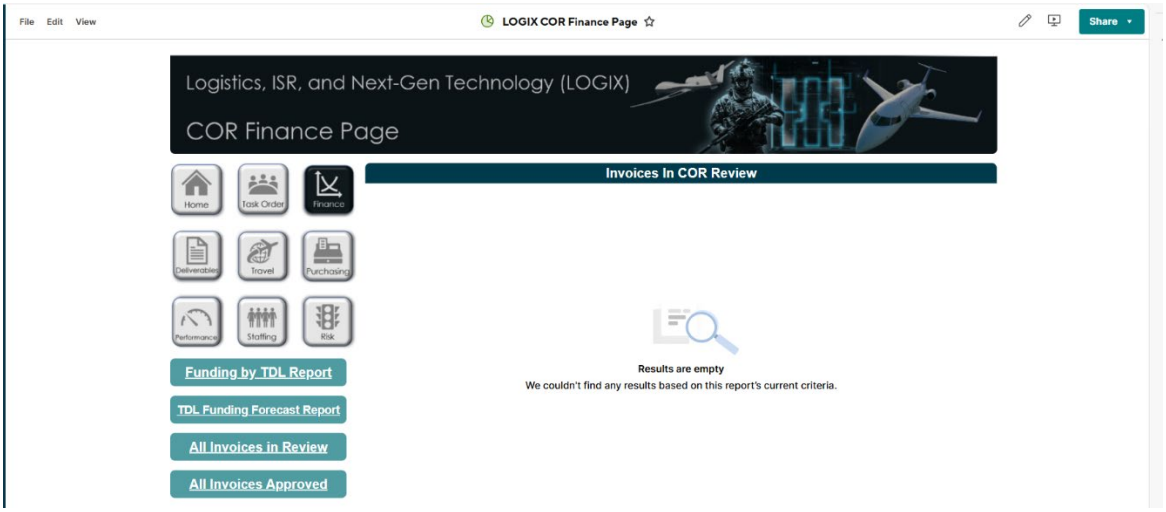

*Figure 10 LOGIX Finance Page*

The purpose of the Finance page is to provide the Government with an overview of financial health of each TDLs/Requirements on the LOGIX Task Order along with the overall Task Order funding status. On this page you can view all the active TDLs, Allocated Budget by CLIN, Funded Amount by CLIN, Committed Amount by CLIN, Invoiced Amount by CLIN, and Burn Rate by CLIN.

## Definitions

- Allocated Budget – This is the estimated budget planned for the TDL, or ROM value.
- Funded Amount – This is the amount of funding provided in the awarded Task Order for each specific TDL and CLIN.
- Committed Amount – This is the amount committed through either RIP, TAR or TR approval.
- Invoiced Amount – This is the amount HII has invoiced the Government.
- Burn Rate – This provides the average monthly invoice amount.

## Additional Reports

On the left side under the navigation pane, we provide additional reports on Finances that may be helpful to the Government. These reports can be modified, or new reports can be made, based on Government requirements.

All information on the Portal, including all reports, are current at the time they are being reviewed. If any errors are identified, please notify the LOGIX Task Order Program Manager to take corrective actions or clarify any discrepancies.

## Ceiling Tracking

The financial tracker is also tracking the ceiling amounts by CLIN stated in the LOGIX Task Order. This tracker would alert our team if funding planned to be added to a CLIN will exceed the Task Order ceiling value. By working with the Government in advance of any funding modifications, we can assist in ensuring ceiling values for any CLIN are not exceeded.

# Deliverables Page

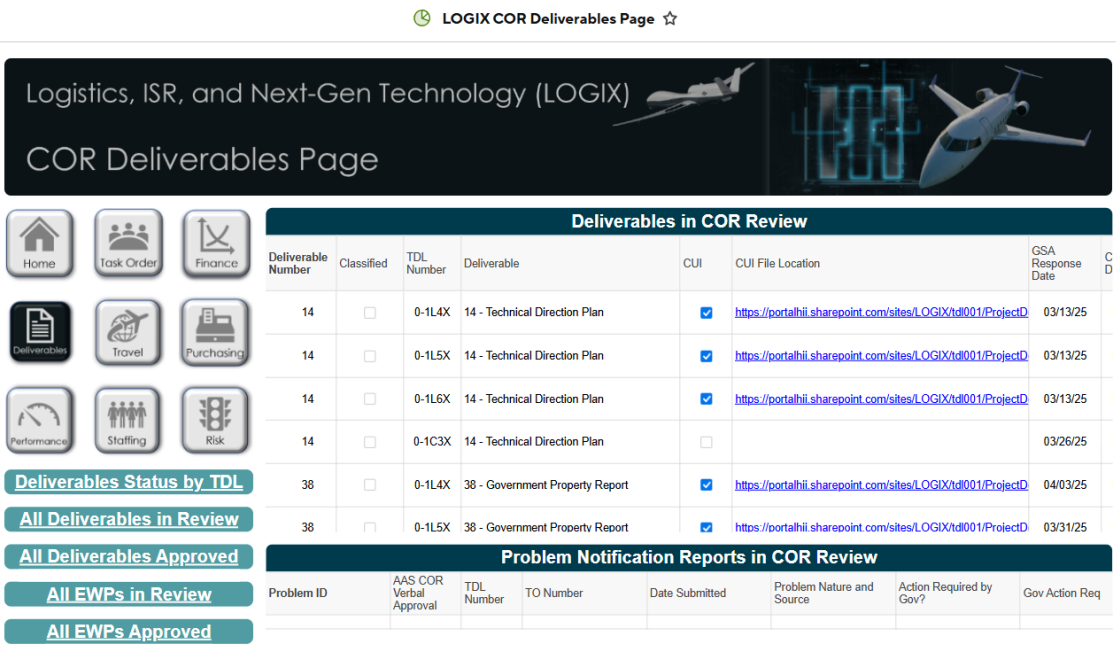

*Figure 11 LOGIX Deliverables Page*

The purpose of the Deliverable page is to provide an organized document library to store management-related deliverables (e.g., Monthly Status Reports (MSRs) (CDRL A005), Financial Reports, PMP TDL descriptions, etc.). On this page you can view all approved Deliverables submitted for the Task Order as well as all approved Deliverables for each TDL,

## Action Items

At the top center of the Deliverable page the details associated with any Deliverable which requires Contracting Officer (top) or COR (immediately below) approval. To complete the review, simply click on the item in the table and this will open the submission details page which was described in the Home page section of this manual.

## Deliverables in Review

This section provides a view of all Deliverables and where they are currently at in the Automated Workflow process for review. Details about the Deliverable are provided in a table grouped by the Current Deliverable Status. Additionally, there is a bar chart that shows the quantity of Deliverables at the various steps of the Automated Workflow

process. This provides insight to the volume of Deliverables currently being routed for review and approval.

## Additional Reports

On the left side under the navigation pane, we provide additional reports on Deliverables to provide an organized document library of approved deliverables. There is a report for Task Order Deliverables which is grouped by Deliverable Type. There is also a report for TDL Deliverables which is grouped by TDL and then by Deliverable. We have also provided a listing of PWS Table 1 Contract Data Requirements List (CDRLs) as a reference on this page.

# Travel Page

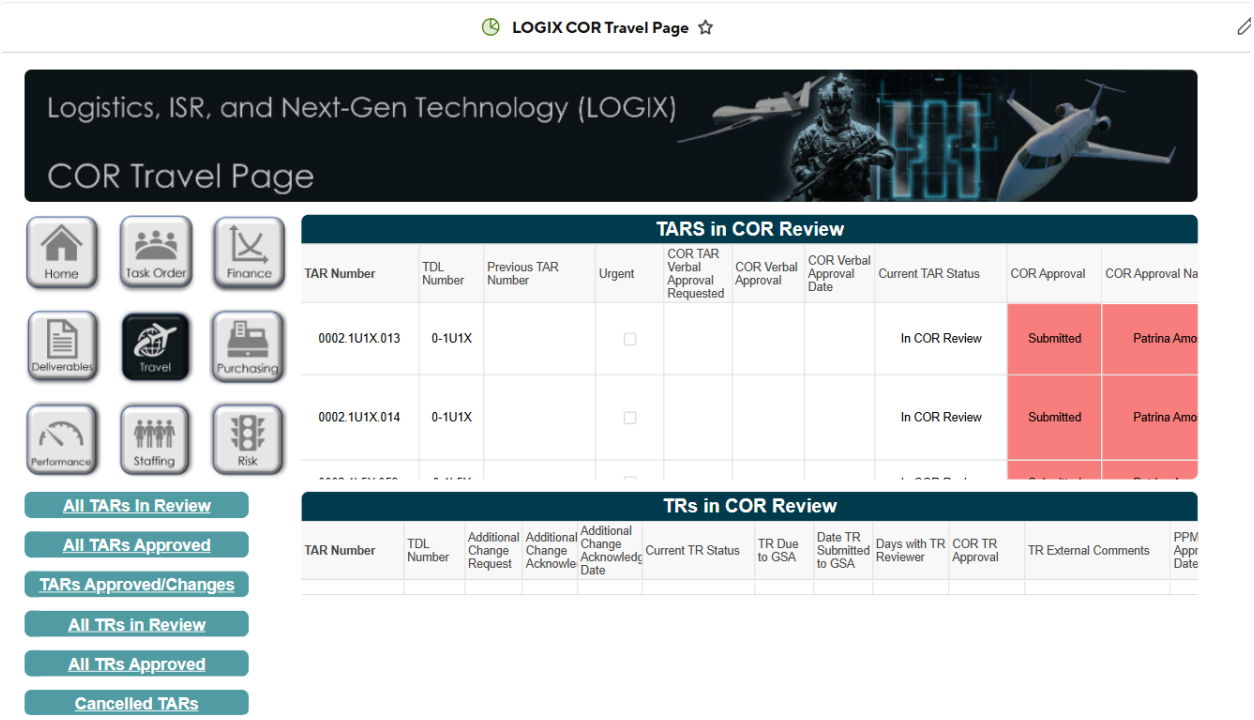

*Figure 12 LOGIX Travel Page*

The purpose of the Travel page is to provide an organized system to store travel-related deliverables (e.g., Trip Reports (TR) (Deliverable 11)) as well as Travel Authorization Requests (TARs). On this page you can view all approved Travel (TAR and TR) for each TDL, as well as finding who is currently on travel based on their TAR itinerary.

## Action Items

At the top center of the Travel page, you will find the details associated with any TAR or TR which requires COR approval. To complete the review, simply click on the item in the table and this will open the submission details page which was described in the Home page section of this manual.

The Workflow Automation for travel ends with the COR so there are no Contracting Officer actions to be done for Travel (TAR or TR).

## Items in Review

This section provides a view of all TARs and all TRs currently in review and where they are at in the Automated Workflow process for review. Details about each TAR and TR are

provided in their respective table grouped by the Current Status. Additionally, there is a bar chart that shows the quantity of TARs and TRs at the various steps of the Automated Workflow process. This provides insight to the volume of TARs and TRs currently being routed for review and approval.

## Additional Reports

On the left side under the navigation pane, we provide additional reports on Travel to provide an organized document library of approved TARs and TRs. There is a report for cancelled Travel. There is also a report to show where all LOGIX contractors are located based on the day you open this report and the approved TAR itinerary.

# Purchasing Page

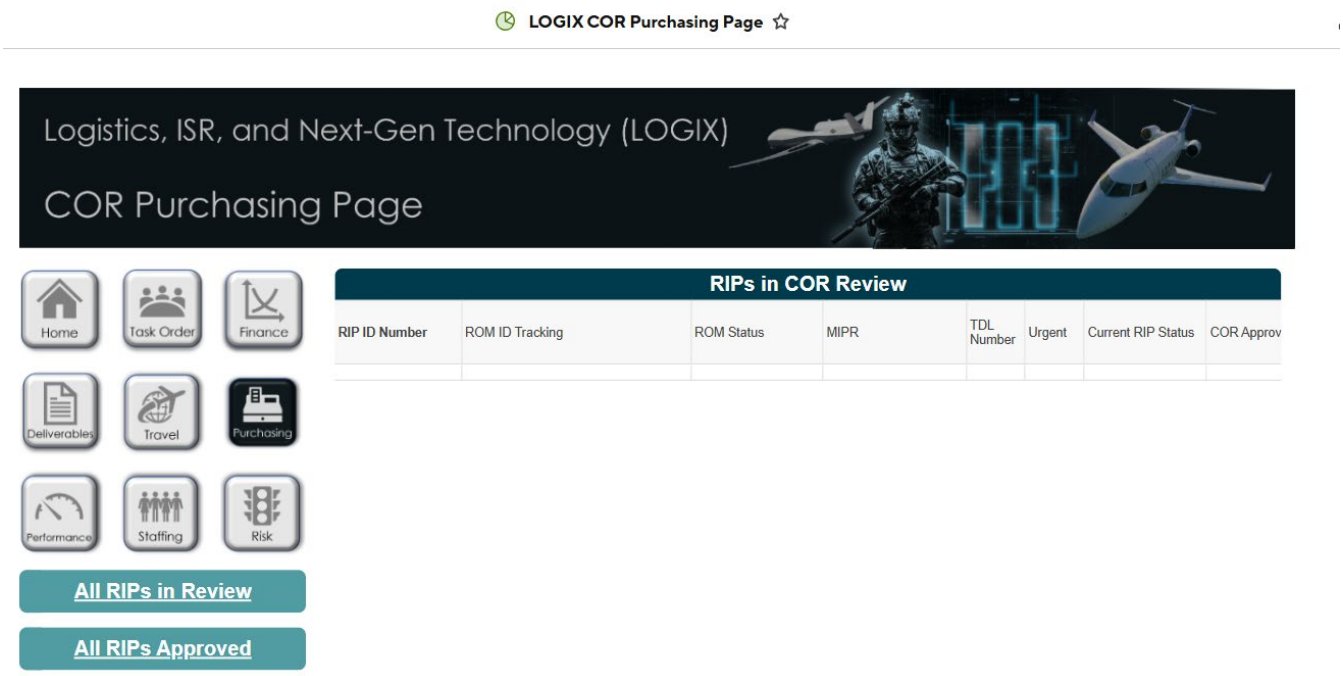

*Figure 13 LOGIX ODC Page*

The purpose of the Purchasing page is to provide an organized system to store Request to Initiate Purchase (RIPs). On this page you can view all approved purchases for each TDL and the status of all RIPs in Workflow Automation. This is designed to provide simple and transparent access for the Contracting Officer and COR about requests to utilize OCONUS Allowances identified in the Task Order Performance Work Statement.

## Action Items

At the top center of the ODC page, you will find the details associated with any RIP which requires Contracting Officer (top) or COR (immediately below) approval. To complete the review, simply click on the item in the table and this will open the submission details page which was described in the Home page section of this manual.

## Items in Review

This section provides a view of all RIPs currently in review and where they are at in the Automated Workflow process for review. Details about each RIP are provided in their respective table grouped by the Current Status. Additionally, there is a bar chart that

shows the quantity of RIPs at the various steps of the Automated Workflow process. This provides insight to the volume of RIPs currently being routed for review and approval.

## Additional Reports

On the left side under the navigation pane, we provide an additional report to provide an organized document library of approved RIPs.

# Performance Page

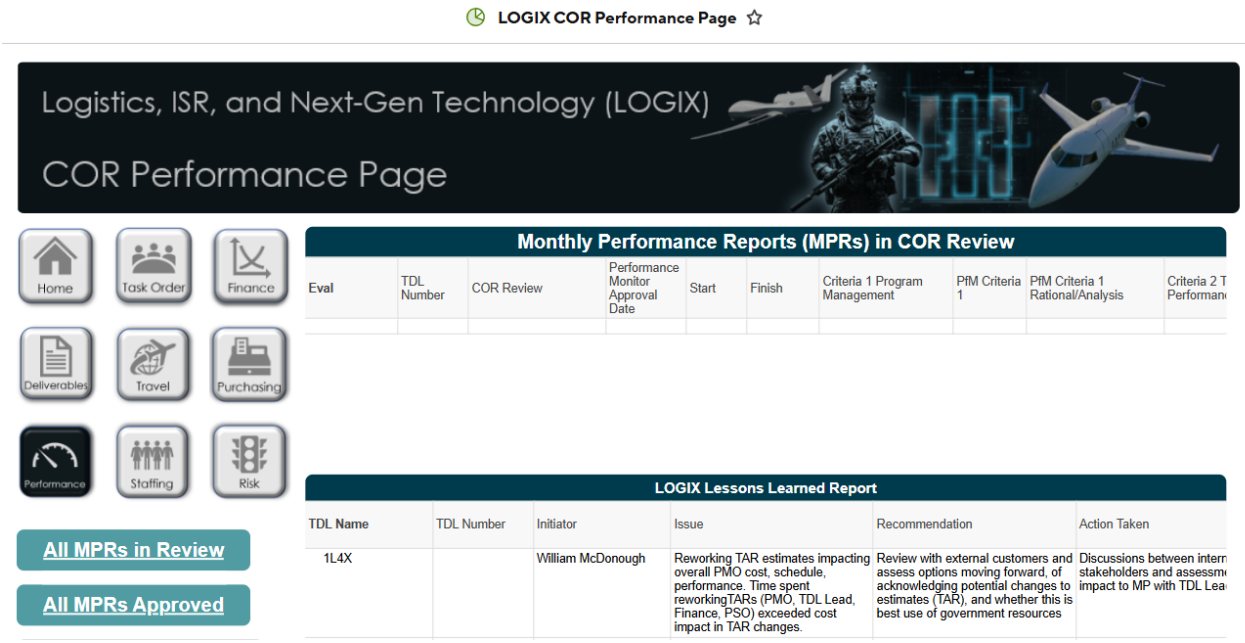

*Figure 14 LOGIX Performance Page*

The purpose of the Performance page is to provide an organized system to store Performance Monitor's Monthly Performance Reports (MPRs) as identified in the Task Order Award Fee Plan. On this page you can approve MPRs, view all previously approved MPRs, and check the status of MPRs in the Workflow. This is designed to provide simple and transparent access for the Contracting Officer and COR about the Contractors performance across all TDLs in the Award Period.

## Action Items

At the top center of the Performance page, you will find the details associated with any MPR which requires COR approval. To complete the review, simply click on the item in the table and this will open the submission details page which was described in the Home page section of this manual.

## Items in Review

This section provides a view of all MPRs currently in review and where they are at in the Automated Workflow process for review. We utilized lessons learned from other Cost Plus Award Fee contracts, using our automation system to significantly simplify the tasks for Performance Monitors to maintain written records of Contractor Performance.

Additionally, there is a bar chart that shows the quantity of MPRs at the various steps of the Automated Workflow process. This provides insight to the volume of MPRs currently being routed for review and approval.

## Additional Reports

On the left side under the navigation pane, we provide an additional report to provide an organized document library of all approved MPRs. This can be used to meet the Award Fee Determination Plan requirement for interim and end-of-period reports. If there are requests for additional reports to be available on this page to meet these requirements or to simplify the Award Fee Determination, please let the HII Task Order Program Manager know about those requirements.

# Staffing Page

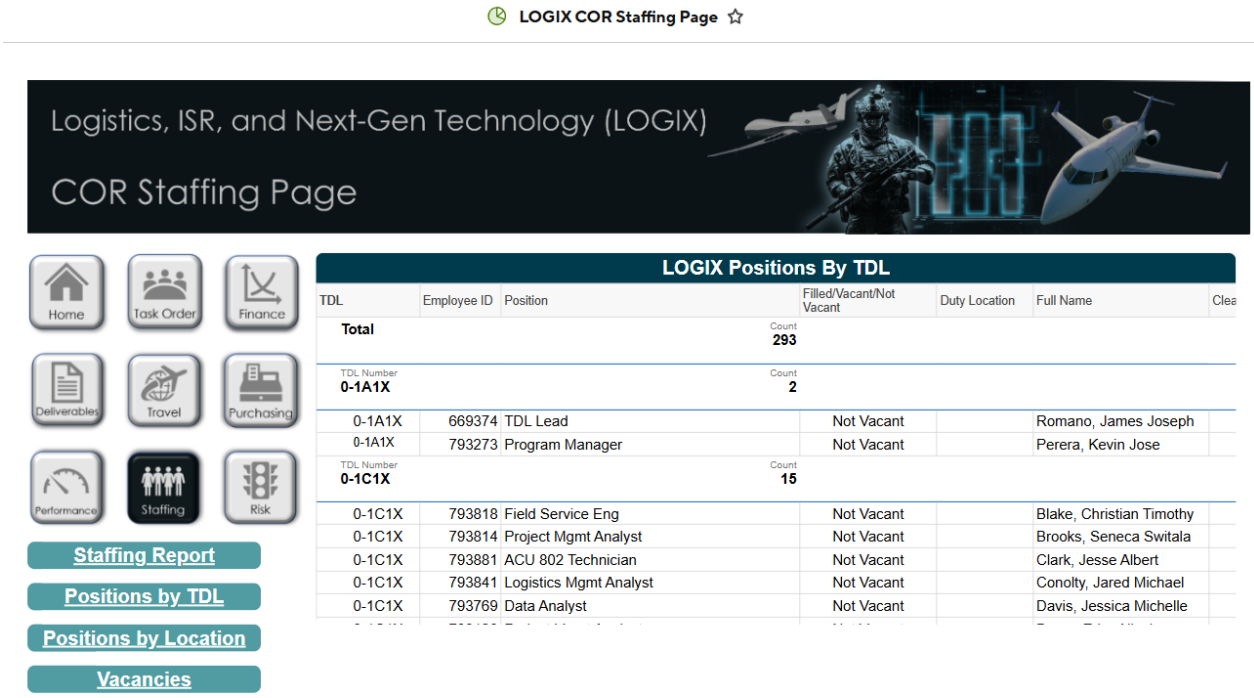

*Figure 15 LOGIX Staffing Page*

The purpose of the Staffing page is to provide an organized system to monitor the status of the contractor to fill all TDL required positions. On this page you can view all positions by TDL which were derived from the Level of Effort Matrix Amendment A002 (Attachment 8) of the LOGIX Task Order Fair Opportunity Proposal Request (FOPR). This is designed to meet and exceed the Task Order PWS requirement to provide a staffing roster inclusive of name, requirement ID, functional role, location, and clearance level.

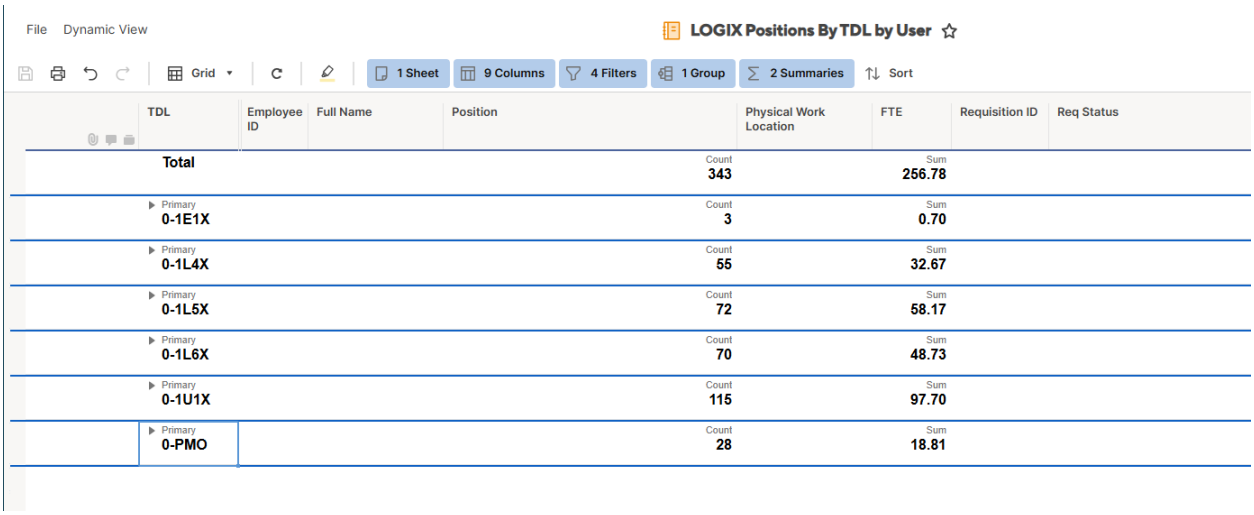

## Additional Reports

On the left side under the navigation pane, we provide additional reports to provide an organized document library.

The Vacancy Report provides a listing of all vacant positions grouped by TDL. For each position we identify the date that the position became vacant and the number of days it has been vacant and any notes we have about filling the position.

The Position by Location report is a summary report that shows the total quantity of positions and the amount of Full Time Equivalents (FTE) for each location and the

number of those positions that are filled. As a summary report, each section can be expanded by clicking the sideways triangle to the left of the word "Location" and this will expand to show you all the details for each position in each location. An image of this is shown below.

| TDL | Employee ID | Full Name | Position | Physical Work Location | FTE | Requisition ID | Req Status |
|---|---|---|---|---|---|---|---|
| **Total** | | | Count 343 | | Sum 256.78 | | |
| Primary 0-1E1X | | | Count 3 | | Sum 0.70 | | |
| Primary 0-1L4X | | | Count 55 | | Sum 32.67 | | |
| Primary 0-1L5X | | | Count 72 | | Sum 58.17 | | |
| Primary 0-1L6X | | | Count 70 | | Sum 48.73 | | |
| Primary 0-1U1X | | | Count 115 | | Sum 97.70 | | |
| Primary 0-PMO | | | Count 28 | | Sum 18.81 | | |

*Figure 16 LOGIX Position by TDL report*

# Risk Page

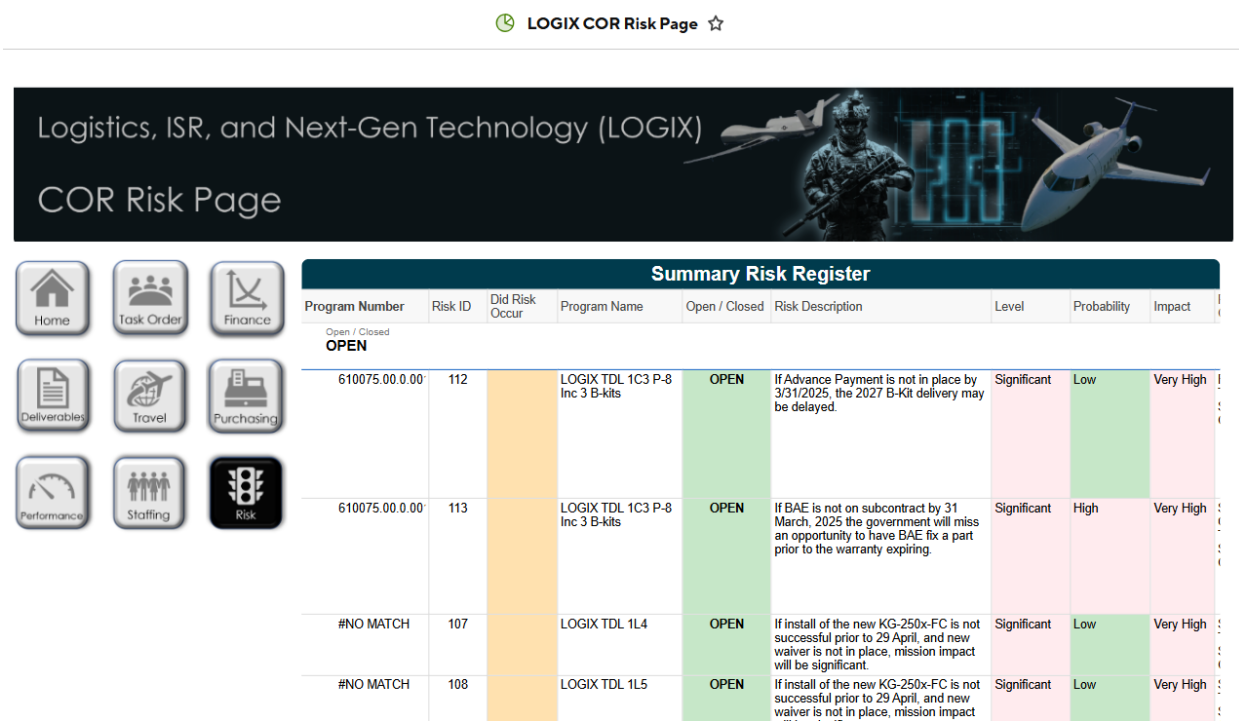

*Figure 17 LOGIX Risk Page*

The purpose of the Risk page is to provide an organized system to store Risks identified on all TDLs. On this page you can view all Risks that the TDL Lead has identified, developed mitigation strategies, and is monitoring. A summary of the Risk Register will always remain present on this page.

# Mobile Application

HII utilizes the Smartsheet software as a service (SAAS) platform to manage the LOGIX Task Order, execute automated workflows, and provide the Portal environment. This platform can also be accessed by the Smartsheet application loaded on a mobile device (smartphone or tablet).

## Sign-In Page

After installing the application, simply tap on the "I already have an account" and use your USAFE e-mail as the username and the password you initially established for Smartsheet. If you no longer remember your password, contact the HII Task Order Program Manager to have your password reset.

## Search

The Search Smartsheet function at the top of the application is very capable of finding what you are looking for. To find your homepage, simply start search "LOGIX COR" and all the related Dashboards and Reports will show.

## Home

The Smartsheet app Home page will show you Recently viewed items. Smartsheet uses 3 types of applications Dashboards, Reports, and Sheets and you will see their icons when you are browsing on the app. These are shown and explained below:

Dashboards – These are your Portal pages

Reports – These are summarized data from one or more Smartsheet

Sheets – This is all the underlying data, you should not ever need to go to Sheets

At the top of the Home page you will be able to view Recents, Favorites, and Offline. As you use the app you may chose to make certain Dashboards or Reports favorites to return to them more easily in the future. We do not offer any Offline features.

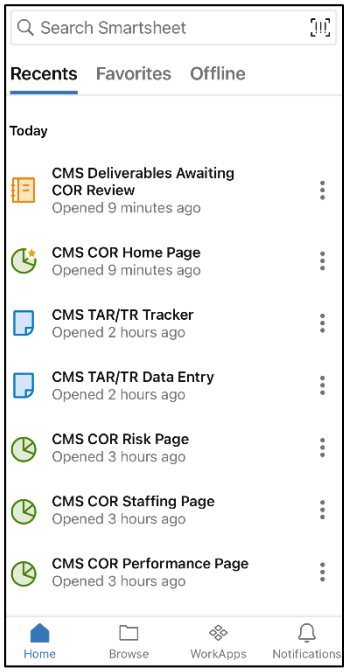

*Figure 18 Smartsheet App Home Page*

## Browse

At the bottom of the screen to the right of "Home" you will see "Browse". The Browse page will start with a view of Workspaces. We have made LOGIX a dedicated workspace that you should see here.

Within LOGIX we have grouped together Dashboards, Reports, and Sheets. Please use the Dashboards as your primary path to viewing and interacting with LOGIX from the Browse page. Dashboard pages on a Smartphone will resize to either portrait or landscape mode and all the interactive features will continue to work.

We recommend navigating to the LOGIX COR Home Page in the app and in the upper right corner you will find 3 dots, select this, and then click on the star just to the left of LOGIX COR Home Page to make this a favorite. Repeat this process for any other pages or reports you'd like to keep as favorites.

## Notifications

At the bottom far right of the app you will find "Notifications". The Notifications page will show you all notifications that you have received. On LOGIX the Contracting Officer and COR Notifications are daily summaries of outstanding actions to be completed on the portal. However, Mission Partners will be getting a notification to review each item (Deliverable, RIP, TAR) as it is submitted. In this situation, the Notifications page will be very helpful to Mission Partners to quickly review and approve while away from a computer.
